Start by filling in the colors, beginning with Box #1. We recommend using the lighter shades first and gradually moving toward the darker ones for optimal results. Be sure to fill every box—no space should be left uncolored—until you have sampled all of your chosen colors. Once your template is complete, simply photograph or scan it and save the image as a standard \*.jpg file. This will ensure that your color selections are accurately captured for creating your personalized Paint-by-Number artwork.
